

CABINPUMP

Waste Tanker Hassles? Overflowing effluent tanks? ...there's a better way

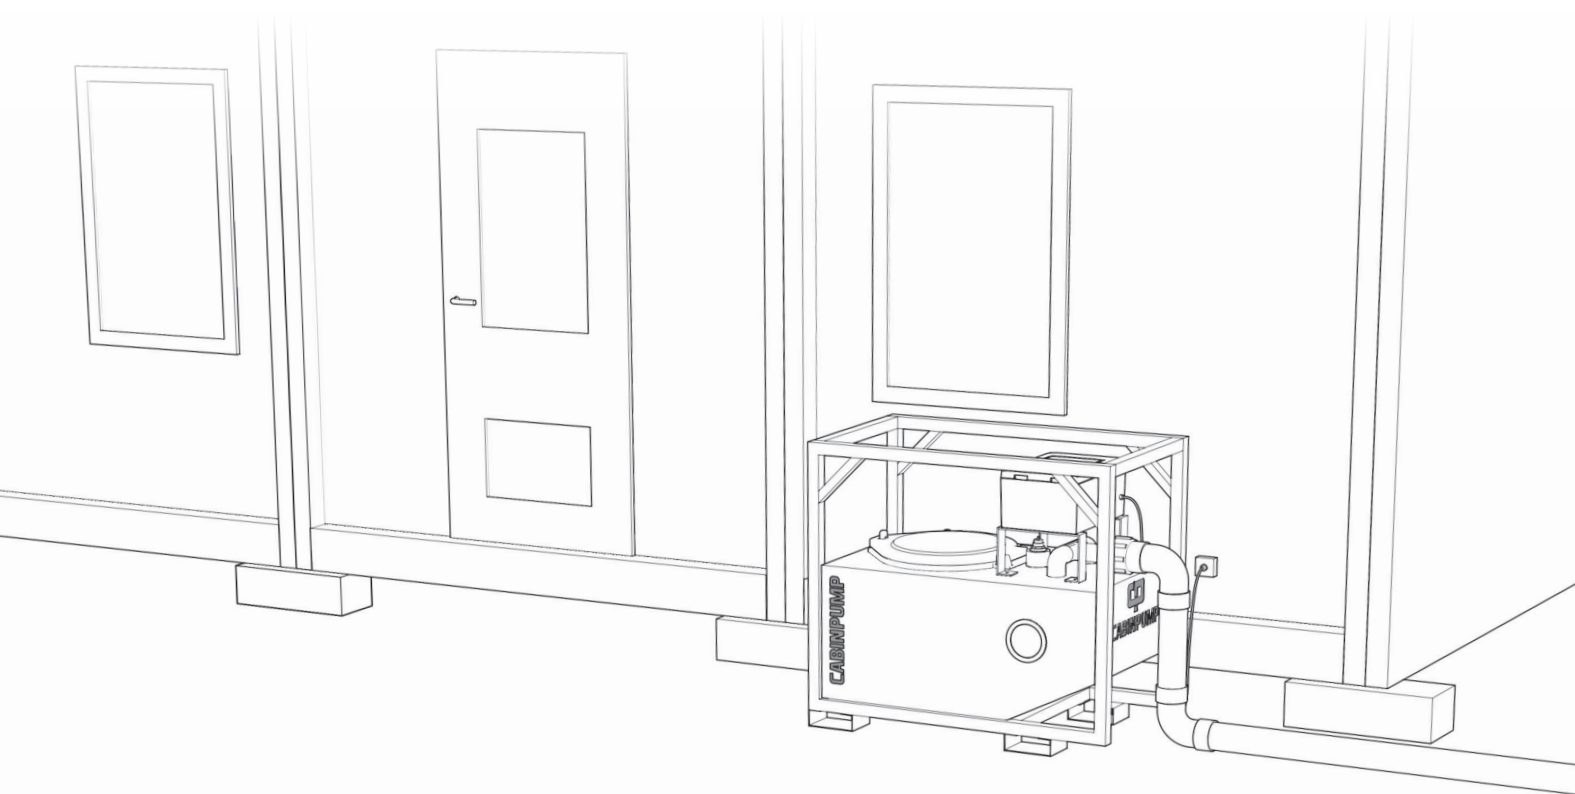

The most portable, powerful and tough
plug-and-play drainage system
for temporary and portable buildings

Why CABINPUMP?

Regular wastewater tankering for temporary and portable buildings can be costly, disruptive, and hazardous wherever you are. Smells, overflowing tanks, site access issues, are just some of the challenges faced everyday by those utilising effluent tanks on sites.

A simple plug and play CABINPUMP system can make your site cleaner, greener and safer.

How does it work?

Foul drain nearby?

Pump wastewater up to 600m to a gravity foul drain to eliminate your wastewater tanker requirements.

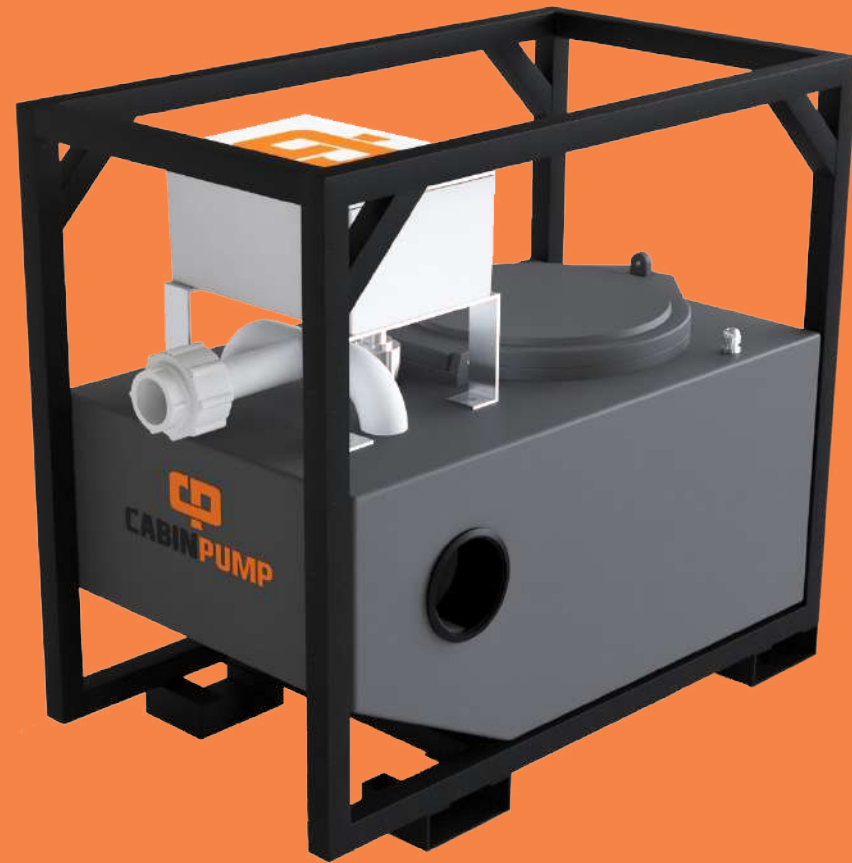

No foul drain nearby?

Use CABINPUMP to pump into large above-ground storage tanks and reduce the frequency of your waste tanker trips.

“ One CABINPUMP is saving our small site £250 per week. We no longer have waste tankers arriving on site weekly so we’re improving our carbon footprint too. ”

A simple Plug-and-Play installation

1 Connect the incoming waste pipe to pre-installed 4" (100mm) connection point.

2 Connect the 63mm pumping main to the supplied compression fitting.

3 Plug the provided 16A 240V plug into a suitable power supply and turn on.

Options

Power Pack
Pump up to 1000m

Lifting Pack
Addition of fork lift pockets

Winter Pack
Addition of pipework frost jacket and heat trace

Remote Monitoring Pack
Addition of SMS alarm system

Security Kit
Combination padlock for chamber lid

CABINPUMP Protect
Monthly fee to replace CABINPUMP in event of emergency (12 or 24 hours)

Scottish Power Case Study

CABINPUMP Ultra was installed on a construction site set-up and pumped the wastewater to a central effluent tank. This provided one central emptying point and allowed multiple accommodation units to use the same effluent tank.

Bristol Airport Case Study

CABINPUMP Ultra was installed on a large air-side temporary toilet block and the wastewater pumped to the nearest gravity drain. This eliminated the requirement for wastewater effluent tanks and frequent air-side empties.
